

**SOLUTIONS BUILT. PROBLEMS SOLVED.**

# **COMPREHENSIVE METAL FABRICATION & REPAIR SOLUTIONS**

**MOCO FAB**  
CUSTOM WELDING & FABRICATING

# WHERE INNOVATION MEETS INDUSTRIAL EXCELLENCE

At Moco Fab, we transform raw steel into precision-engineered solutions for your industrial and commercial needs. With state-of-the-art equipment and expert craftsmen, we deliver custom steel fabrication that meets the highest standards of quality and precision.

## WHY CHOOSE MOCO FAB?

### **Precision Engineering**

Every project built to exact specifications

### **Quality Assurance**

Rigorous quality control on every weld and cut

### **Industrial Expertise**

Specialized knowledge of industrial environments

### **Emergency Response**

Available for urgent repairs and shutdowns

### **OSHA Compliance**

All safety installations meet regulatory standards

### **Custom Solutions**

Tailored fabrication for unique industrial needs

# TRANSFORM YOUR INDUSTRIAL VISION INTO REALITY

---

## STRUCTURAL STEEL SOLUTIONS

### Structural Steel Repair & Reinforcement

- Expert repair of damaged support beams, mezzanines, and catwalks
- Structural integrity assessments and reinforcement solutions
- Emergency structural repairs to minimize downtime

### Guard Rail, Handrail & Safety Barrier Systems

- OSHA-compliant installations around machinery, walkways, and loading docks
- Custom safety solutions for high-risk industrial environments
- Professional installation and maintenance services

## CUSTOM ACCESS SOLUTIONS

### Platforms, Stairs & Ladders

- Custom fabrication for machinery and storage area access
- Multi-building facility solutions
- Engineered for safety and durability

### Emergency Welding Repairs

- On-site repairs for broken frames and cracked welds
- Available during shutdowns and overnight operations
- Rapid response to minimize production interruptions

## LOADING DOCK & SECURITY

### Dock Equipment Solutions

- Custom dock plates and bumper fabrication/installation
- Heavy-duty metal plates for dock-to-trailer connections
- Specialized solutions for heavy equipment operations

### Bollards & Crash Posts

- Protection systems for truck bays and pedestrian areas
- High-traffic zone safety installations
- Custom designs for specific facility needs

### Welded Fence & Gate Systems

- Perimeter security solutions for large campuses
- Zone division fencing for industrial facilities
- Custom gate fabrication and repair services

## STORAGE & ORGANIZATION

### Welded Shelving & Racking

- Custom storage solutions for parts, tools, and raw materials
- Repair services for existing racking systems
- Heavy-duty industrial storage fabrication

### Custom Tool Racks & Mobile Workstations

- Specialized solutions for evolving production lines
- Mobile carts for flexible workspace configurations
- Custom tool organization systems

## INFRASTRUCTURE SUPPORT

### Conveyor Support Systems

- Maintenance and repair of non-automated conveyor supports
- New support fabrication and guard rail installation
- Custom transfer table solutions

### Pipe Rack & Support Structures

- Fabrication for non-pressurized utility lines
- Support structure repair and reinforcement
- Custom mounting solutions

### Tank Stands & Support Systems

- Welded support stands for stationary tanks and containers
- Custom brackets and skids fabrication
- Heavy-duty mounting solutions

## SPECIALIZED SERVICES

### Ventilation Support Systems

- Non-electrical support brackets for dust and exhaust systems
- Custom mounting structures for ventilation equipment
- Industrial air handling support solutions

### Metal Door Frame Reinforcement

- Security upgrades for vulnerable entry points
- Reinforcement for high-traffic and older buildings
- Custom security enhancement solutions

### Steel Canopy & Awning Frames

- Repair services for door, walkway, and loading dock coverage
- Weather protection structure fabrication
- Custom architectural metalwork

# QUALITY ASSURANCE

Every project undergoes comprehensive quality control measures. We begin with material certification to confirm all components meet required specs.

Throughout production, we check for dimensional accuracy, perform weld quality testing, and inspect the surface finish to ensure a clean, consistent result. When needed, we also conduct load testing to verify structural strength. Every job wraps up with a final quality inspection before it leaves our shop.

# EQUIPMENT TECHNOLOGY

We use a range of tools and systems to ensure accuracy, efficiency, and consistency across every project.

Our shop is equipped with CNC machinery and plasma cutting systems for precise, repeatable cuts. Press brakes allow for accurate bending and forming, while multiple welding stations are set up to handle projects of all sizes. We design and plan using CAD/CAM software, and every step is backed by reliable quality control equipment to make sure the work meets our standards.

# OUR COMMITMENT TO QUALITY IS BUILT INTO EVERY WELD, EVERY CUT, AND EVERY FINISHED PRODUCT.

Each of our projects undergoes rigorous quality control measures to ensure they meet our exact standards and exceed client expectations, delivering results that are both visually impactful and strategically effective.
